Project Overview

2.1. About Bles Dairies East Africa

Bles Dairies is a family-owned company with roots in dairy farming that reach back to 1854. As a group Bles Dairies combines consultancy, local operations and practical farming experience. Your work spans Bles Dairies Consultancy, Bles Dairies East Africa and Bles van Benthem Farm in the Netherlands.

2.2. Objective

To design, develop, and deploy a modern, secure, and user-friendly ecommerce platform for Bles Dairies East Africa that enables direct online sales of dairy products and related products (e.g., silage, genetics service bookings, inputs), integrates M-Pesa and card payments, and supports inventory, customer data, and seller analytics.

2.3. Background

The company currently maintains a corporate website but lacks a robust ecommerce component capable of handling online sales, real-time payments, and customer management. Expanding to a dedicated ecommerce platform will drive direct revenue, improve customer experience, and support digital transformation goals..

2.4. Challenge at Hand

Current Website:

- Corporate presence with company information and services.
- No integrated online sales, cart, payment processing, or digital ordering flows.

Challenges Identified:

- No direct online channel to sell products/services.
- Limited or no integration with local payment ecosystems like M-Pesa (critical in Kenya).
- Lack of backend systems for order management, stock control, and customer analytics.
- Difficulty tracking orders, customers, and campaign performance

Proposed Solution

We propose the deployment of a state-of-the-art web application that incorporates a functional global website. The website will entail the following system features:

3.1. Frontend & User Experience:

- Professional, responsive UI/UX for web and mobile users.
- Homepage highlighting products, services, and key company info.
- Product catalog with categories (e.g., dairy products, silage, genetics, training packages).
- Product search, filters, and sorting.
- Customer account registration & profile management.
- Order history & delivery tracking.

3.2. Ecommerce Core Functionality:

- Shopping cart & checkout process.
- Payment integrations: M-Pesa (Lipa Na M-Pesa online integration).
- Shipping options and delivery cost configuration.
- Coupon codes, discounts, gift vouchers.
- Multi-currency support (optional)..

3.3. Backend Admin Portal:

- Dashboard with KPIs: sales, customers, orders, products.
- Product inventory management (stock, SKUs).
- Order management (status updates, returns, refunds).
- Customer management (profiles, addresses, order history).
- Reporting & analytics (sales trends, customer behavior).

3.4. Optional Add-Ons:

- Card payment gateway
- Loyalty program / reward points system.
- Automated email/SMS notifications.
- Blog or learning center (dairy tips, news, sustainability stories).
- Integration with CRM or ERP systems (future expansion).

3.5. Benefits to Bles Dairies:

Business Growth

- Direct online revenue channel with 24/7 accessibility.
- Expanded customer reach (farms, cooperatives, consumers nationwide).
- Analytics-driven sales and marketing decisions.

Enhanced Customer Experience

- Convenient digital ordering with local payment options.
- Order tracking and personalized user dashboard.
- Loyalty incentives drive repeat business.

Operational Efficiency

- Centralized inventory & order management.
- Reduced administrative overhead for sales tracking.
- Scalable foundation for future services or marketplaces.

Brand & Market Leadership

- A modern digital presence positions Bles Dairies as a forward-thinking industry leader in East Africa.
- Strengthens engagement with partners, farmers, and consumers.

4.1. Implementation Timeline:

Phase	Activity	Duration	Key Outputs
1	Discovery & Requirements	1 week	Final requirements, sitemap, UX wireframes
2	Design and Prototyping	1.5 weeks	Mockups, UI/UX flows
3	Development and Payment Integration	6 weeks	Ecommerce setup, checkout, admin portal, M-Pesa & live
4	QA Testing	1 week	Bug fixes, user testing
5	Post-Deployment Support	Ongoing	Live site, documentation and maintenance

Total Estimated Time: 10 Weeks

4.2. Cost Estimates:

Component	Estimated Cost
Requirements & UX Design	Kes 120,000
UI/UX & Frontend	Kes 200,000
Backend Ecommerce Dev	Kes 250,000
Payment Gateway Integration	Kes 100,000
Total Cost	Kes 670,000

All prices are VAT exclusive unless stated otherwise.

Conclusion

By deploying a robust ecommerce platform with integrated local payments like M-Pesa and global card acceptance, Bles Dairies East Africa can unlock new revenue streams, improve customer satisfaction, and build a scalable digital ecosystem for future services — all aligned with its mission to strengthen dairy sector profitability and sustainability.
